

Personal Statement Sample

OUTLINE STRUCTURE

▪Introduction

- Write a hook, a compelling anecdote, a rhetorical question, or a striking fact that highlights your personality, values, and goals, while engaging the reader's senses.
- Briefly introduce yourself and your aspirations, connecting them to the captivating opening.
- Form a thesis statement having a clear purpose followed by three points (based on your three abilities/skills developed through academic achievement, personal experience, and future goals).
- Transitional hook

▪Body paragraph: Academic achievements

- Provide a topic sentence introducing the academic details and accomplishments leading to skill development that would help you achieve your purpose.

▪Body paragraph: Personal experiences

- Provide a topic sentence introducing the personal experiences leading to skill development that would help you achieve your purpose.

▪Body paragraph: Future goals

Provide a topic sentence introducing the future goals and their impact on society.

▪Conclusion

- Reiterate your core message, express your enthusiasm, leave a memorable final thought

Personal Statement Prompt

Admissions Open: BS Computer Science

Are you fascinated by technology and the endless possibilities of innovation? Do you aspire to become a part of the rapidly evolving world of computing, software development, artificial intelligence, game development, and digital problem-solving? Our BS Computer Science program invites passionate, creative, and motivated students who are eager to shape the future through technology.

- **Write a personal statement** explaining why you want to join the BS Computer Science program, what inspired your interest in this field, what qualities or experiences make you a suitable candidate, and how you hope to contribute to the world of technology in the future.

Introductory Paragraph

Anecdote

Lead-in

Thesis with 3 supporting arguments

Transitional hook with 2 forward hooks

Every time when I reach into my pocket and pull out my phone, I am holding more computing power than the systems that once guided humanity to the moon. What was once a triumph of enormous machines, brilliant minds, and extraordinary effort is now something I carry with me every single day. As a 17-year-old aspiring computer scientist, I, Muhammad Ahmed, am driven by the rapid advancements in technology to contribute to this dynamic field. Steve Job's assertion that technology will revolutionize education inspires my pursuit of a computer science degree. I aim to contribute to the advancement of technology through Computer Science (purpose) by **showcasing abilities** within gaming industry (Supporting argument 1: Skill 1), **demonstrating my analytical problem-solving skills** (Supporting argument 2: Skill 2) and **contributing leadership skills** to the growth of e-sports (Supporting argument 3: Skill 3). That power drives my interest in both game development and evolution.

Body Paragraph 1 (Academic Achievements: State how academic rewards/qualification helped you develop skill)

**Topic Sentence
with 2 reverse
hooks**

Major Details

Minor Details

**Transitional
hook with 2
forward hooks**

The rapid evolution of technology has strengthened my ambition to innovate in game development and enhance user experience through interactive design. One key area of innovation lies in creating immersive gaming environments, as modern games now incorporate advanced graphics and virtual reality to produce lifelike experiences. This allows players to engage more deeply with digital worlds and experience storytelling in new ways. Another important aspect is improving user engagement through intelligent systems. Artificial intelligence enables games to adapt to player behavior, making gameplay more dynamic and personalized. While innovation in gaming fuels my creativity, it also demands strong problem-solving abilities and effective computational thinking.

Body Paragraph 2 (Personal/Skill Building Experiences: State how your personal experiences helped you develop skill 2)

**Topic Sentence
with 2 reverse
hooks**

Major Details

Minor Details

**Transitional
hook with 2
forward hooks**

To succeed in this field, I aim to develop the ability to solve complex technological problems and apply logical reasoning in programming tasks. Problem-solving is essential when designing efficient algorithms. Optimizing code ensures that games run smoothly without lag or performance issues. Debugging and system analysis are also critical skills. Identifying and correcting errors in code helps maintain functionality and improves overall system performance. By strengthening these abilities, I will be able to create reliable and efficient technological solutions. Beyond technical problem-solving, my vision expands toward contributing to the growth of e-sports and strengthening global digital communities.

Body Paragraph 3 (Future Goals: State how will help you achieve future goals through skill 3)

**Topic Sentence
with 2 reverse
hooks**

I aspire to contribute to the growth of e-sports by supporting competitive gaming platforms and expanding global digital communities. E-sports platforms provide opportunities for players to compete professionally. Online tournaments and streaming services allow players to showcase their skills to a global audience. Digital communities play a crucial role in expanding the reach of e-sports. Social media and online forums connect players, fans, and developers worldwide. Through these contributions, I hope to support the continued expansion and accessibility of the e-sports industry.

Concluding Paragraph

Reiteration of Core Message

Expansion of Core Idea

Expression of Enthusiasm

Memorable Final Thought

In conclusion, my passion for computer science is driven by my desire to innovate in game development, solve complex technological problems, and contribute to the growing world of e-sports. These goals reflect not only my academic interests but also my commitment to shaping the future of digital technology in meaningful ways. I am eager to expand my knowledge, refine my skills, and actively engage in a field that continues to transform how people connect, learn, and compete. Just as the technology we carry today once powered humanity's greatest achievements, I aspire to be part of the next generation that pushes these boundaries even further.
