

Operating Systems

Quiz 3

Q1:

Write a C program that:

1. Creates **two child processes**.
2. Each child performs a different task:
 - Child 1: Executes `ls -l` and writes output to `ls.txt`.
 - Child 2: Executes `date` and writes output to `date.txt`.
3. The parent:
 - Waits for all children using.
 - Read and print data from `ls.txt`
 - Read and print data from `date.txt`
 - Prints a completion message.

Question 2:

Write a program that:

1. Creates shared memory using `shmget()`.
 2. Parent process:
 - Writes an integer array (size 5) into shared memory.
 3. Child process:
 - Reads the array.
 - Computes the sum.
 - Writes the result back to shared memory.
 4. Parent prints the result.
-
