

National University of Computer and Emerging Sciences, Lahore Campus

	Course:	Programming Fundamentals	Course Code:	CS1002	Marks:
	Program:	BS (Software Engineering)	Semester:	Fall-2025	13.5 15
	Duration:	30 Minutes	Total Marks:	15	Name: [REDACTED]
	Quiz Date:	9 Sep, 2025	Weight		Roll No: [REDACTED]
	Section:	BSE-1A	Page(s):	2	Quiz-1 (A)

Q1: Predict the Output (5 Marks)

Analyze the following C++ program. Write down the exact output it will produce.

If the program contains any error, identify it clearly.

```
#include <iostream>
using namespace std;

int main() {
    int a = 12, b = 5;
    cout << (b != 4) << endl;
    cout << ((a && a) || (b && 0)) << endl;
    cout << (a % b + a / b) << endl;
    bool result = (a != b) && (a - b == 7);
    cout << result - 5 << endl;
    cout << ((a + b == 17) || (a * b == 50)) << endl;

    return 0;
}
```

1
1
4
~~4~~
-4
1

4.5

Q2: Find ALL Errors (3 Marks)

The following code has different types of errors. Write the line number and the error type with a few words solution in the answer for all the errors.

```
1. #include <iostream>
2. using namespace std;
3.
4. int main() {
5.     int x, y;
6.     cout << "Enter two numbers: " << endl;
7.     cin >> x << y;
11.    if (x > y) {
12.        cout << "X is smaller" << endl;
16.    }
17.    return 0;
18. }
```

→ syntax error
line 2: terminator ";" not used
Correct statement: using namespace std;
line 7: Wrong symbol used after x to input y. (syntax error)
Correct statement: cin >> x >> y;
line 12: Wrong statement is given as output for the condition x > y.
Correct statement: cout << "X is greater" << endl;
(This is logical error)

3

Q3: Write a program using if-else that takes three numbers and prints the largest number (7 Marks)

Example Runs:

Input: 5 7 2 → Output: 7 is the largest number

Input: 10 4 8 → Output: 10 is the largest number

Input: 3 9 9 → Output: 9 is the largest number

6

Code:

```
#include <iostream>
using namespace std;
int main () {
    int num1, num2, num3;
    cout << "Enter three integers: Input "; endl;
    cin >> num1 >> num2 >> num3;
    if (num1 > num2 && num1 > num3) {
        cout << "num1 << " Output: num1 << " is the largest number";
    }
    else if (num2 > num1 && num2 > num3) {
        cout << num2 << " is the largest number";
    }
    else if (num3 > num1 && num3 > num2) {
        cout << num3 << " is the largest number";
    }
    else {
        cout << "Invalid input";
    }
    return 0;
}
```

Equals condition?
